CENTRAL REGION ENTERPRISE WINS

The current book, all closed inside the territory this role covers, all under a C-level sponsor, all from an account list that was blank when I started.

SLB, Houston. Global energy technology. Opened and closed at Analyst1 this year.

American Airlines, Dallas Fort Worth. Transportation enterprise with a large public-facing estate.

Arvest Bank and Alliant Credit Union. Regulated financial institutions where audit and examiner timing shaped the cycle.

Xcel Energy. Utility and critical infrastructure buyer.

Prior Central wins. Centene, Anthem, Ascension, Mercy, BJC HealthCare, SSM Health, Edward Jones, Mastercard, Emerson, Graybar, Ameren, Enterprise Holdings and Anheuser-Busch.

ATTAINMENT RECORD

Red Hat, \$7M. 160%. Then 128% of \$5M and 137% of \$3.5M. Three consecutive years over plan. President's Club.

Alfresco, \$4M regional target. 146%. Full P&L, three enterprise AEs, my own \$1.5M inside the team number. President's Club.

Couchbase, territory number. 135%. Every dollar from a new customer, carried through the July 2021 IPO.

Gigamon, \$750K region. 125%. Directed the SDR, sales engineer and professional services against one number.

Cloudflare, \$1M. 115%. More than \$4M of pipeline across 35 named prospects, nearly all self-sourced.

Adobe, \$2M annual. Cleared all four years. Over \$5M in enterprise revenue. Two-time President's Club.

PARTNER-GENERATED PIPELINE

- **WWT:** I signed this partnership myself at Red Hat and have carried it through Cloudflare, Gigamon and Analyst1. Four employers, one relationship, and I have maintained every renewal of it myself.
- **Optiv, GuidePoint Security, SHI and CDW:** active deal registration, joint account mapping, quarterly reviews and co-sell that produces sourced pipeline.
- **At Cloudflare partner-sourced business** grew 25% through executive engagement across the partner base.
- **Regional integrators** sit inside most of my target accounts already, which shortens the path to the security architect and the budget owner in the same quarter.

MACHINE IDENTITY AND CERTIFICATE LIFECYCLE

- **Cloudflare,** where TLS underpinned the entire product line. Renewal cycles, chain of trust and the operational cost of an unmanaged certificate estate were recurring themes with security and platform teams.
- **Red Hat,** three years on OpenShift and Kubernetes. Provisioning service accounts, handling workload credentials and rotating certificates is daily operational work for the platform teams that bought from me.
- **The risk narrative** behind this category is one my buyers already carry: unplanned outages from expiry, audit findings on unmanaged keys, and remediation cost when nobody owns the inventory.
- **Non-human identity** is growing faster than the human kind. My current number sits on an AI-native security product, I hold twenty completed AI certifications, and EasyGuitar AI is an iOS application I designed and shipped in SwiftUI, so agent and workload credentials are something I can discuss from use.

LONG-CYCLE ENTERPRISE EXECUTION

Anchor deal, Centene, \$5M annual. Opened cold into a Fortune 25 payer with no active project. Worked infrastructure, application development, security and enterprise architecture as separate threads before proposing anything.

Security and procurement gauntlet. Cleared architecture review, vendor risk assessment, procurement and legal myself over several months, redlines included, and displaced an incumbent embedded across the estate.

Commercial construction. Built the modernization and total cost case with the CFO organization. My career began in corporate procurement, so the case gets written the way the committee will read it.

Result. A \$5M annual agreement with services attached, which anchored a year finishing at 160% of \$7M.

PROCESS, FORECAST AND GO-TO-MARKET

MEDDPICC. Written down and enforced. Deals without a reachable economic buyer get disqualified early, which is why the commit holds under inspection.

Pipeline management. Weekly opportunity-level inspection in Salesforce, each deal carrying a current next step, a named risk and the executive ask. HubSpot in the current seat.

Go-to-market collaboration. I build and maintain the competitive battlecards my current field team uses and feed positioning back to Product and Marketing from repeated deal evidence.

Events and community. I grew a regional user group from roughly 20 attendees to 150 and presented at the sessions. Industry conferences and regional security events are a standing part of my prospecting rhythm.

Coaching. Three enterprise AEs coached under full regional P&L at Alfresco. Two sales development representatives onboarded at Analyst1, plus the Central account executive I helped hire.
