SOUTH CENTRAL, CARRIED TODAY

Texas, Louisiana and Arkansas sit inside the thirteen-state region I own right now. Three of this year's closed logos land squarely in this patch.

SLB, Houston. Global energy technology company, opened and closed from a cold account list.

American Airlines, Fort Worth. Transportation enterprise running a large application estate and workforce.

Arvest Bank, Arkansas. Regulated financial institution where audit and examiner timing shaped the cycle.

Adjacent regional history: Exxon during my Alfresco tenure, plus OG&E, FirstEnergy and Paycom from the Couchbase book.

ATTAINMENT RECORD

Red Hat, \$7M. 160%. Then 128% of \$5M and 137% of \$3.5M. Three consecutive years over plan. President's Club.

Alfresco, \$4M regional target. 146%. Full P&L, three enterprise AEs, my own \$1.5M inside the team number. President's Club.

Couchbase, territory number. 135%. Every dollar from a new customer, carried through the July 2021 IPO.

Gigamon, \$750K region. 125%. Directed the SDR, sales engineer and professional services against one number.

Cloudflare, \$1M. 115%. More than \$4M of pipeline across 35 named prospects, nearly all self-sourced.

Adobe, \$2M annual. Cleared all four years. Over \$5M of enterprise revenue in the period. Two-time President's Club.

THE ACCESS PROBLEM, FROM THE SELLING SIDE

- Cloudflare, two years selling verified access to internal and SaaS applications. Entitlements routinely outlived the people and projects that created them, so no one could produce a current answer on who could reach what.
- Application sprawl was the underlying condition. Teams adopted SaaS faster than IT could inventory it, which left security defending a perimeter around an estate they could not fully see.
- Red Hat, three years on OpenShift and Kubernetes. Service accounts and workload credentials multiplied inside every cluster I sold, well ahead of any governance model for them.
- Alfresco sold information governance, so retention, entitlement and audit trail conversations with counsel in the room are familiar ground.
- Regulated buyers throughout: payers, health systems, banks, credit unions and utilities, where a failed access review carries consequences on a published timeline.

MAPPING TO THE ROLE

Full cycle ownership. Prospecting through close has been mine at every employer. Centene ran from a cold account through technical evaluation, procurement and legal with no handoff at any stage.

Regional pipeline generation. I took ownership of pipeline for my current region and onboarded two sales development representatives, giving each a tiered target list, a written qualification bar and the outbound messaging to work from.

Enterprise complexity. Sixteen years selling exclusively into large organizations. Multi-stakeholder committees, security review, legal redlines and finance scrutiny are the normal shape of my cycle.

Expansion inside accounts. Graybar, BJC, Ascension, Mercy and SSM Health all grew beyond the entry product under me at Cloudflare, with partner-sourced revenue up 25%.

Category creation. Four times I have carried a product with no established budget line, which means writing the first pitch, the first objection handling and the first proof plan personally.

Startup pace. Analyst1 is a founder-led motion I joined early. Couchbase was pre-IPO. Both required building the playbook while carrying the number.

IT and security together. Access decisions get made where those two functions meet, and I have sold to both sides of that table for four years.

AI AGENTS AND NON-HUMAN IDENTITY

- Twenty AI certifications completed spanning IBM AI Academy, Microsoft, AWS and LinkedIn Learning, with the AWS practitioner exam scheduled.

- My current number sits on an AI-native security product, sold to enterprises that interrogate model behavior and data handling before committing.
- EasyGuitar AI is an iOS application I designed and shipped in SwiftUI starting from zero code. Building it showed me the gap between what these systems do reliably and what they merely appear to do.
- Practical result: when a security architect asks what an agent should be allowed to approve without a human, that conversation starts with me and an engineer joins for depth.

ANCHOR DEAL: CENTENE, \$5M ANNUAL AGREEMENT

- Opened cold into a Fortune 25 healthcare payer with no active project and no budget line for the category.
- Worked infrastructure, application development, security and enterprise architecture as separate threads, learning what each group was measured on before proposing anything.
- Ran the technical evaluation, then built the modernization and cost case with the CFO organization.
- Cleared architecture review, vendor risk assessment, procurement and legal over several months, redlines included, displacing an incumbent embedded across the estate.
- Signed at \$5M annually with services attached, anchoring a year that closed at 160% of \$7M.
