Re: Enterprise Account Executive, Central

Dear Hiring Team,

I carry the Central territory today. This year it has produced SLB in Houston, American Airlines, Arvest Bank, Alliant Credit Union and Xcel Energy, each closed under a CISO or C-level sponsor. All of them started as names on a blank list. You ask for a proven record inside this specific geography. Mine is current, closed this year.

The technical ground fits as well. Three years at Red Hat put me on OpenShift and Kubernetes inside AWS, Azure and GCP estates, selling to the platform and DevOps teams who actually build what a cloud security platform has to make sense of. Two years at Cloudflare followed on cloud and application security, sold to security architects consolidating point tools onto one platform. My last four years have been security without interruption, and today's quota rides on an AI-native product.

On advising CISOs, the deal I would point to is Centene. It opened cold into a Fortune 25 organization with no active project and an incumbent already embedded across the estate. I brought a point of view about their environment before I brought a proposal, ran the technical evaluation, built the financial case with the CFO organization, and cleared architecture review, procurement and legal myself. It signed at \$5M annually and anchored a year that finished at 160% of \$7M. Career attainment has landed between 115% and 160%.

Partner alignment is a real part of how I sell. I signed WWT myself at Red Hat and have carried that relationship through Cloudflare, Gigamon and Analyst1, with joint account planning and deal registration running through Optiv, GuidePoint Security, SHI and CDW. Those firms are already inside most of my target accounts.

I'd welcome the chance to talk about the territory and the accounts I'd open first.

Best regards,

Ken Clemons
